

THE COMPUTER MAN

A Reliable PC Service For Sussex & Surrey.

The Computer Man began business in 1999. With over 15 years experience we started providing personal computer services to meet the needs of small business & home computer users initially in the Gatwick area.

While working with a previous computer firm, founder Shush Arya identified a massive need to provide a friendly and personal service to computer users that was reliable, flexible and jargon free.

He saw many in the industry who played on the ignorance of individuals, with these rogue technicians trying to blind people with science rather than explain in simple terms what the problems were and what the solution would be. Shush wanted to create a truly valuable service for PC users.

This coupled with the fact that many of the larger PC shops and suppliers provided very poor onsite service and personal support especially for minor problems and no education on best computing practices, he decided to setup The Computer Man business.

In 2003 Geoff Williamson teamed up with Shush. Geoff with vast experience in the IT sector became available following the closure of the Ford showroom at Three Bridges where he looked after their PC Network. A good friend of Shush introduced Geoff to him and after one meeting they decided to work together.

Having served thousands of customers to date, many who are regulars, our mission at The Computer Man is not only to put computer problems right providing a solution to the problem every time we also want to educate users on how to best utilise Information Technology to meet their business and personal needs.

Beware of the Technology "Rogue Trader"

Unfortunately (as with many traditional trades) many have jumped on the band wagon to try to make a fast buck as so called "Computer Experts". Time and time again we go into customers who have called in someone previously who say they had very little experience and did not really know what they were doing. The customer ultimately ended up paying for an un-resolved problem.

The Computer Man offers an in office or in home service at a time which is convenient to you so there is none of this waiting all day. We also operate evenings and weekends which may be more convenient for those who are working during the day. We provide a free phone booking line and also take all major debit and credit cards for your convenience.
